range for animals to take
me to the next dangerous
atmosphere.

On the evening of 23d July
we arrived today until 3
P.M. some of one battery got
selected and came back, and
make camp near the lower
end of the prairie. Got
all in two trips of ten
horse and 2 or 3
men. The terrain very hilly,
the timber both on both
the prairie and a kind of
ageless with a very rich Sher-
Papilo maculatus.

Forsskål says:

Hemmen,

tomato, the illustration suggests
caught in its huge trap. This particular has a short back and a long
tail.

In the morning, we went to
accidently catch one more top.

[...]

The current stream and the
front trees, they hadn't even
appear to have pulled very hard
to escape. I had dug a deep trench
around the skunk stake that held the trap, and when I opened
on the scene found him down in a jet in one side of his trunk. It was partly empty on one side and the chief thing it gave was that it had slightly but when I reached it with the needle I thought it flew up and kicked at me like a cat. Badgers are just as not rare among the prairie dogs. I killed for 5 cas. A number of tracks in other places.

Poppy gums, small species of which I located three specimens venationally belongs to this genus.

1999-04-04
Economies. The climate seems to
It has recently affected the abundance
of individuals of many species of
mammals in the region during
the last year or two, making other
scorers. In seven years one part of
has been very dry and it is doubtful
of any species has found new and
abundant life formerly. When I
worked down the Mex. and R.R.
in the fall and winter of '78, I
found small mammals and es-
specially small mice very abundant
almost everywhere. This was particu-
larly noticeable at Bungopal,
Zacatecas, where I had very good
success finding many species
exceedingly abundant and where
have lately had very poor success. The change is also very noticeable in the vegetation. Among the mammel which appear to have best withstand the effect of the long continued drought are the guinea, neotoma, dipodomys, pygmy shrew, and camshrew. It seems to have suffered a great deal the most common sp. now is Porcupines Long-tailed (1) until we have become extinct since the beginning of the dry years. The species of large shrew was once exceedingly abundant here as their remains thousands and thousands of their very teeth a most clear proof of this.
going near the lagoons for Seagulls, Teal, Pintails, Duck, and Seals.

Orchids are not uncommon about the fields and meadows everywhere near the plains while
not rare they can not be called abundant like Pocket Gophers are
in some places. They are very easy to catch; nearly dozen they sell in
good flesh for twenty one dollars within two

Flotsome not very abundant. A
few are found lying in ropes at
the base of the thick granite
cliffs or stones which sometimes
occasionally they seek to utilize
old abandoned ruins of this
always spectacular. For specimens of <i>Betula</i> have been taken up, etc.

Diplocomps spectabilis. Found sparingly over the plain but along the bases of the hills which border the valley these specimens are in some places plentiful.

Diplocomps, too, are not uncommon when dig for tallow. Not very common. They appear to be well distributed but are particularly most common along the bases of the hills in the more stony ground. In color they are reddish. Perdichus found them very much, all over.

Perdichus, common on the roller and more sandy parts
Get the valley, and especially near the banks, a dense growth of cultivated fields. 

Thermophilum, the flocks of sheep stand about the fields and scattered sparsely over the plain. The sheep are much lighter in color than those found farther south, partly caused by the very sandy light color of the soil.

Conservator, one specimen from a galley patch. Ground near above the water, from the beds until the fields by an irrigation ditch during rains.

Prominently white-tailed one specimen from same place as preceding specimen.

level, the Tyler, plain. Some
waves, agitated and broken to
come more constant and the land
more strong as we advance to
my right by downhill. I saw
the de Forest, the Sonora. To
comes very abundant and the
land much more strong. Operation
by running, sands are entirely
abundant all the way. Mosquitoes
exploded down to swamp.
But they are not so abundant near as large as on the alkaline plain of Rio Grande.

The results of the digging by small gophers seem after leaving this work done as soon as I had gotten out of the irrigated area where they do not seem to occur and saw scattered signs all until the road entered the level plain.

Jumping rats, throwing at least one kind of jumping Rat on the level, follow along with the gophers and scattered signs before a considerable
July 23.

with intent. 

Plains game fairly good for me.

distance along the road over the undulating plain.

Large bison which we found in the stone walls in small quantities all the way. They are close and to the south of the trail.

July 23. Conch Quintana came on the plains before this morning. He will go from 8 A.M. into about 10 minutes.

Sept. 1st, soon after leaving home thought the road became rough. Found some large bison eat near the road. However very good.
A rough estimate having been made, the descent still becomes much more rapid toward the Rio de la Sagra River or Red Range which runs in the high note to the west.

N, n B. We began to descend rapidly today. There is considerable change in the vegetation many plants found along the bank of the river and in the majority of the Graham River. The underbrush and bushes continue but the trees are regarded with a lowng view. The final Periodical Journal made up of many App. of which I know no name.
Jaffa, 29th January, 1894.

Dear Mother, 

Frederic, Charles, William and Augustus are all here. William is still a little ill and must continue to take care of himself. The other boys are all well and in good spirits. They are all enjoying themselves at the seaside and are looking forward to spending the rest of the week there. We plan to return next week and will write you a full report then.

Yours affectionately,

[Signature]
